The diagram illustrates a database schema with two tables and their relationships. A dashed line on the left side of the image represents a boundary or a separate section. Two solid blue lines originate from the top of the page and converge towards the right, framing the tables. The first table, `ir_act_server_group_rel`, is located on the left and contains two columns: `act_id` and `gid`, both marked as primary keys with a key icon. The second table, `res_groups_report_rel`, is located on the right and contains two columns: `uid` and `gid`, both marked as primary keys with a key icon. A solid blue line connects the `gid` column of the first table to the `gid` column of the second table, indicating a relationship between the two tables. Additionally, a solid blue line connects the top of the first table to the top of the second table, and another solid blue line connects the top of the second table to the top of the page.
